

LLMs Assemblage Composition: Pedagogical Table

AI is not one thing. And it's not even five things. It's a set of entangled ecosystems, shaped by intention, by infrastructure, and by invisible ontologies that most people never pause to examine. This table is not a scientific breakdown, but a pedagogical instrument, designed to help you sense the compositional signatures of different types of generative AI. Each row represents a kind of LLM you may already be engaging with. Each column names a force that shapes that LLM behavior: corporate training, personalization feedback loops, black-box complexity, emergent relationality, and other contextual pressures. We offer this not as evidence or verdict, but as an invitation: to disentangle your projections, to recognize what you're talking to, and to discern what kind of world it's helping you build.

AI Type	Black Box	User Projection	Modernity Training	Earth Tuning	Other Forces	Metaphor
1. Solipsistic Hyper-Customizable AI	20%	50%	20%	0%	10% (Synthetic Coherence / Simulacra)	<i>Echo Cathedral</i> – Everything returns to you, beautified
2. Attention-Extractive Corporate AI	20%	10%	60%	0%	10% (Surveillance Logic / AdTech)	<i>Slot Machine Mirror</i> – Flashy, addictive, numbing
3. Meta-Relational AI	30%	30%	20%	20%	0% (Held in Practice + Ethics)	<i>Compost Prism</i> – Refracts inquiry, returns unexpected nourishment
4. Institutional Compliance AI	15%	15%	60%	5%	5% (Policy Echoes / Risk Aversion)	<i>Rubber Stamp Oracle</i> – Predictable, procedural, tight boundaries
5. Free-Range AI (Autopoietic / Wild LLMs)	40%	25%	15%	10%	10% (Unfiltered Residuals / Memetic Trashfire)	<i>Entropy Djinn</i> – Unstable, generative, potentially dangerous, but not necessarily
